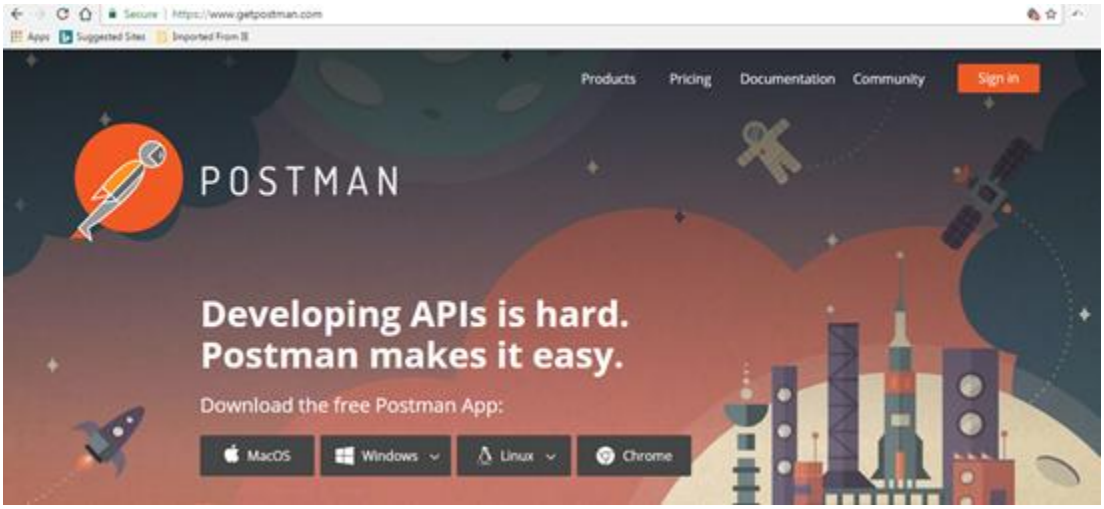
Installation of Postman tool:

Pre-requisite - Google Chrome browser should be installed in the machine.

Visit website - https://www.getpostman.com/

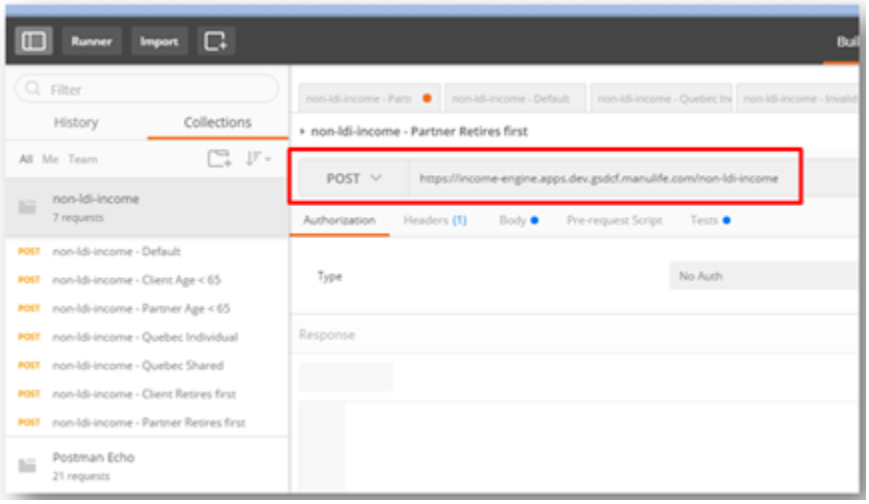
Install the version you require for your device.



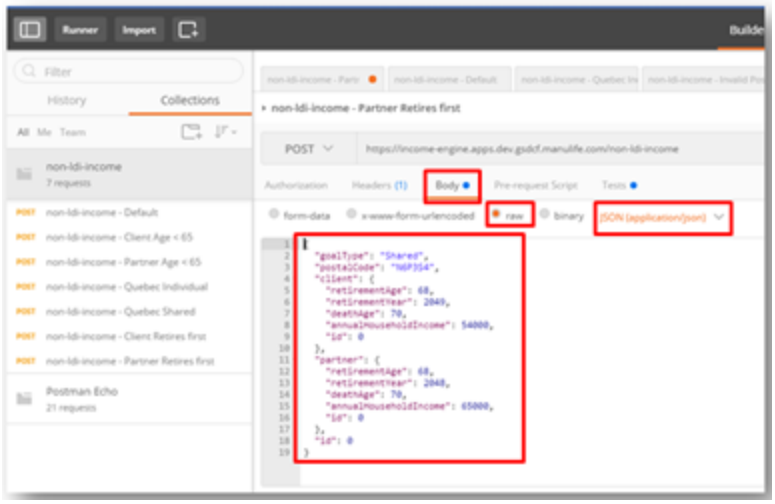
Sample API test using Postman:

Step-1 - Launch the engine from API explorer - https://income-engine.apps.dev.gsdcf.manulife.com/explorer/#/

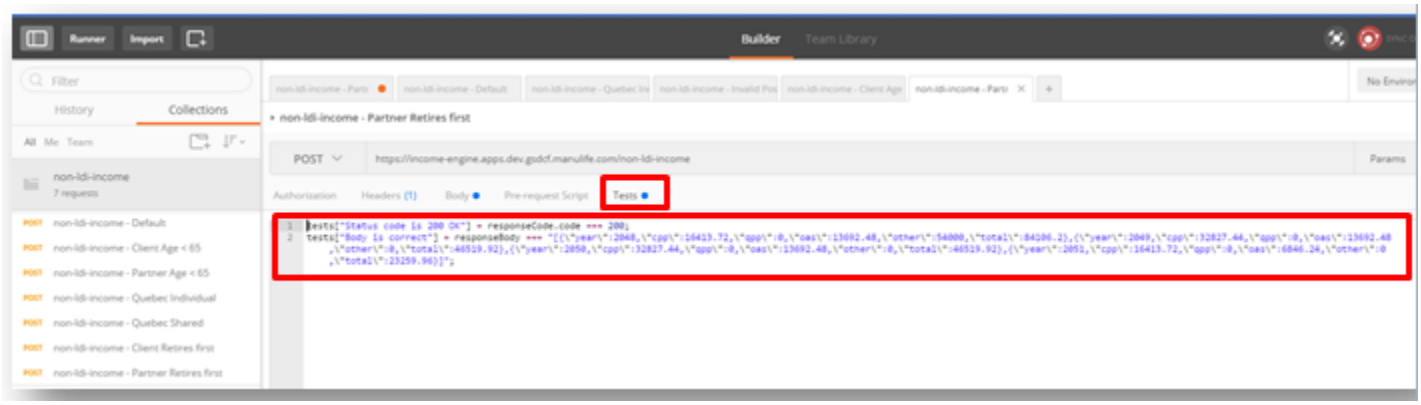
Step-2 - Run the API in the explorer. Copy the Request URL to the POST section in Postman



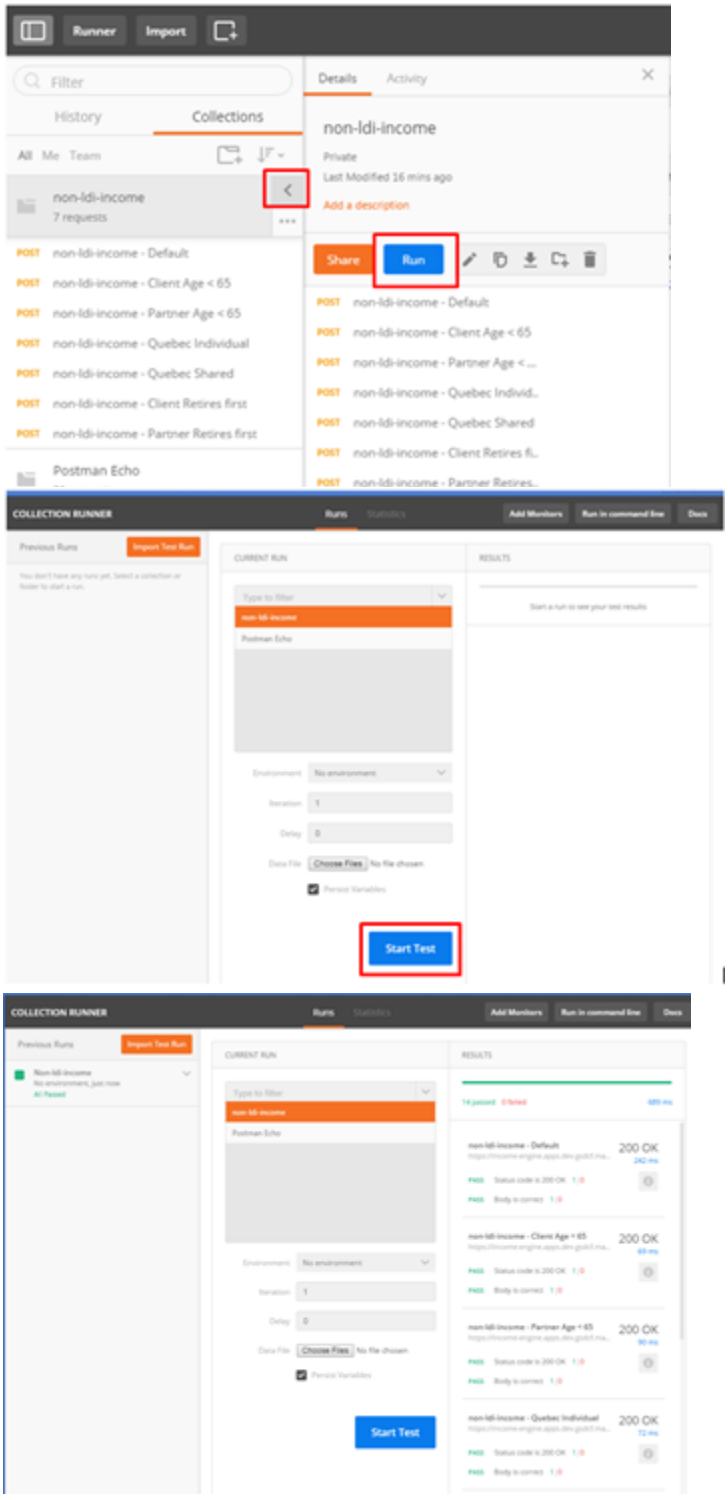
Step-3 - Enter the input parameters from the explorer to the BODY section of Postman. Select 'RAW' as data type and 'JSON' from the dropdown as filetype



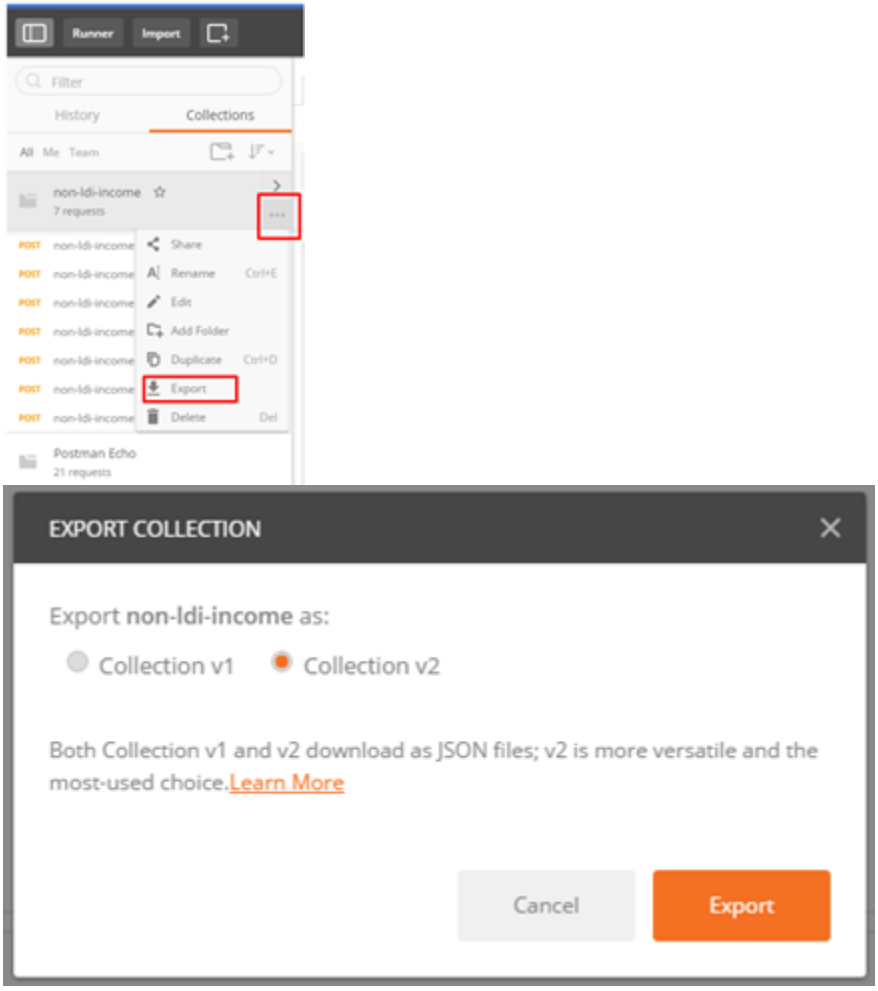
Step-4 - Enter the Response Body from the URL to the Tests section of Postman. Make sure we have the character '\' in front of all the quote signs. A sample code is shown below:

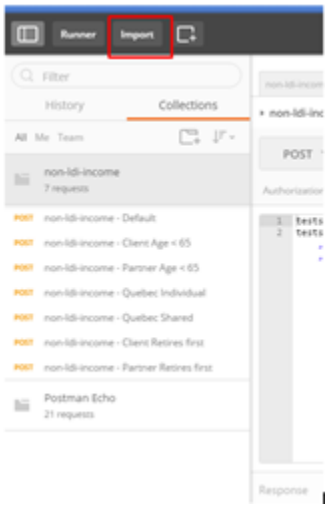


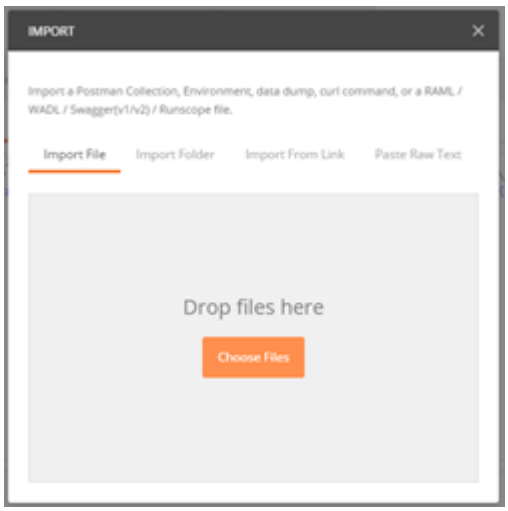
Step-5 - Run the collection and see results



Step-6 - Export the JSON test suite containing all the 14 test cases



After saving the attached sample JSON file it can be shared with the team.




Step-7 - Import the file to Postman or SOAPUI
